Safety

IMPORTANT SAFETY INSTRUCTIONS

1. To disconnect the machine from the electrical power supply, turn off the power switch and remove the power cord plug from the wall socket. The wall socket must be easily accessible and in close proximity to the machine.
2. Read these instructions carefully. Save these instructions for future reference.
3. Follow all warnings and instructions marked on the product.
4. Do not use this product near water.
5. Do not place this product on an unstable cart, stand, or table. The product may fall, causing serious damage to the product.
6. Slots and openings in the cabinet and the back or bottom are provided for ventilation; to ensure reliable operation of the product and to protect it from overheating. These openings must not be blocked or covered. The openings should never be blocked by placing the product on a bed, sofa, rug, or other similar surface. This product should never be placed near or over a radiator or heat register, or in a built-in installation unless proper ventilation is provided.
7. This product should be operated from the type of power indicated on the marking label. If you are not sure of the type of power available, consult your dealer or local power company.
8. Do not allow anything to rest on the power cord. Do not locate this product where persons will walk on the cord.
9. Never push objects of any kind into this product through cabinet slots as they may touch dangerous voltage points or short out parts that could result in a fire or electric shock. Never spill liquid of any kind on the product.

CE MARK

This device complies with the requirements of the EEC directive 2004/108/EC with regard to "Electromagnetic compatibility" and 2006/95/EC "Low Voltage Directive".

FCC

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference.
- (2) This device must accept any interference received, including interference that may cause undesired operation.

CAUTION ON LITHIUM BATTERIES

There is a danger of explosion if the battery is replaced incorrectly. Replace only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

Battery Caution

Risk of explosion if battery is replaced by an incorrectly type. Dispose of used battery according to the local disposal instructions.

Safety Caution

Note: To comply with IEC60950-1 Clause 2.5 (limited power sources, L.P.S) related legislation, peripherals shall be 4.7.3.2 "Materials for fire enclosure" compliant.

4.7.3.2 Materials for fire enclosures

For MOVABLE EQUIPMENT having a total mass not exceeding 18kg, the material of a FIRE ENCLOSURE, in the thinnest significant wall thickness used, shall be of V-1 CLASS MATERIAL or shall pass the test of Clause A.2.

For MOVABLE EQUIPMENT having a total mass exceeding 18kg and for all STATIONAR EQUIPMENT, the material of a FIRE ENCLOSURE, in the thinnest significant wall thickness used, shall be of 5VB CLASS MATERIAL or shall pass the test of Clause A.1

LEGISLATION AND WEEE SYMBOL

2002/96/EC Waste Electrical and Electronic Equipment Directive on the treatment, collection, recycling and disposal of electric and electronic devices and their components.

The crossed dustbin symbol on the device means that it should not be disposed of with other household wastes at the end of its working life. Instead, the device should be taken to the waste collection centers for activation of the treatment, collection, recycling and disposal procedure.

To prevent possible harm to the environment or human health from uncontrolled waste disposal, please separate this from other types of wastes and recycle it responsibly to promote the sustainable reuse of material resources.

Household users should contact either the retailer where they purchased this product, or their local government office, for details of where and how they can take this item for environmentally safe recycling.

Business users should contact their supplier and check the terms and conditions of the purchase contract.

This product should not be mixed with other commercial wastes for disposal.

Detailed driver installation instructions are included on the driver CD.

4. Peripherals Installation

4.1. Accessing to the I/O

- a. Loosen the thumb screws (2) to remove the front side stand cover.

- b. Loosen the thumb screws (2) and disconnect the cable to release Main board module.

- c. Lift the Main board module up to access to the I/O

4.2. MSR Installation

The MSR unit is tested and can be supplied at your request. This MSR is removed during transportation and can be connected by the user.

a. Remove the screws (2) to release the MSR dummy door from the system.

b. Slide the MSR into the position

c. Fasten it to the display housing by tightening the screws (2).

4.3. Cash Drawer Installation

You can install a cash drawer through the cash drawer port. Please verify the pin assignment before installation.

5. System Disassembly

5.1. Replacing the HDD

- a. Loosen the thumb screws (2) to remove the front side stand cover.

- b. Disconnect the SATA cable (1) and loose the screw (1) to loose the HDD bracket from the system.

- c. Separate the HDD bracket as upward direction from the hooks as circles marked on the system.

- d. Turn the rear of HDD bracket front and remove the screws (4) to unfasten the HDD from the HDD bracket.

5.2. Replacing the Slim VFD

a. Loosen the thumb screws (2) to remove the stand back cover.

b. Remove the screws (2) to release the VFD from the system

c. Disconnect the cable to replace the VFD

5.3. Replacing the Mainboard

Remove the stand back cover as described in chapter 5.2 (a)

a. Loosen the thumb screws (2) and disconnect the USB cable (1)

b. Remove the screws (2)

c. Remove the metal cover to access the Mainboard.

d. Disconnect all the cables (9)

e. Pull the thumbscrew (1) in the direction as shown by the arrow to release the main board tray from the system

f. Remove the hex screws (2)

g. Remove the screws (6) to replace the main board from the tray

5.4. To Separate the Panel from the Stand

Please first follow the steps in chapter 5.2 (a), 5.3(a)(b)(c)

a. Disconnect the cables (5)

b. Remove the hinge covers(2) one from each side

c. Remove the screws(6), 3 from each side to separate the display from the stand

d. Separate the panel from the stand

5.5. Replacing Inverter Board, Touch Screen Board & MSR Board

Please first follow the steps in chapter 5.2 (a), 5.3(a)(b)(c), 5.4

a. Remove the screws (4)

b. Remove the screws(2) to remove the MSR cover

c. Remove the screws(1) then remove the display cover from the panel

d. Now you can access to the Inverter board, touch board, and the MSR board

To replace the Inverter Board

Remove the screws (2) and disconnect the cables (3).

To replace the Touch Board

Remove the screws (2) and disconnect the cables(2).

To replace the MSR Board

Remove the screws (2) and disconnect the cable (1)

COM3 & COM4 Power Setting

COM3 and COM4 can be set to provide power to your serial device.

The voltage can be set to +5V (default) or 12V by setting jumper JP18 on the motherboard.

When enabled, the power is available on pin 10 of the RJ45 serial connector..

If you use the serial RJ45 to DB9 adapter cable, the power is on pin 9 of the DB9 connector.

By default, the power option is **disabled** in the BIOS.

Enable COM3/COM4 power in BIOS

1. Power on the system, and press the key when the system is booting up to enter the BIOS Setup utility.
2. Select the Advanced tab
3. Select **Power Configuration COM/VGA Ports** and press <Enter> to go to display the available options.

- To enable the power, select **COM3 Power Setting** or **COM4 Power Setting** and press <Enter>. Select **Power** and press <Enter>. Save the change by pressing F10.

If necessary change the voltage of the COM port by adjusting the JP18 jumper setting

User Defined Character Command Set

Function	Command	Description
Del 1 Character	[02h][FDh][55h][00h][n]	Delete one user defined character data. [n] = 20h ~ FFh for displayable character codes
Del All Characters	[02h][FDh][55h][01h][00h]	Delete All User-Define Characters
Set 1 Character	[02h][FDh][55h][02h][n] [m1][m2][m3][m4][m5]	Set one user defined character [n] = 20h ~ FFh for displayable character codes/[m1]~[m5] = Character data byte 1 ~ 5/Ref. table below
Read 1 Character	[02h][FDh][55h][03h][n]	Read one user define character data [n] = 20h ~ FFh for displayable character codes
Read All Characters	[02h][FDh][55h][04h][00h]	Read all user defined character data (Character 20h ~ FFh)

Set User-Define Character 5x7 dot layer out

Bit assignment:

bit 7	bit 6	bit 5	bit 4	bit 3	bit 2	bit 1	bit 0
-------	-------	-------	-------	-------	-------	-------	-------

5x7 dot bit assignment: 1 means fill dot, 0 means empty dot.

Command	Code (hex)	Function Description
US r n	1F 72 n	➤ Select/cancel reverse character. n = 00,01
US MD1	1F 01	Specify overwrite mode.
US MD2	1F 02	Specify vertical scroll mode.
US MD3	1F 03	Specify horizontal scroll mode.
CAN	18	Clear cursor line
ESC # n	1B 23 n	➤ Command type select n = 30h ~ 37h
US # n x	1F 23 n x	➤ Turn annunciator on/off. n = 0 for annunciator off n = 1 for annunciator on ➤ x = 1 ~ 14h, for columns location.
US C n	1F 43 n	➤ Set cursor on/off n = 00, 01
BS	08	Move cursor left
HT	09	Move cursor right
US LF	1F 0A	Move cursor up
LF	0A	Move cursor down
US CR	1F 0D	Move cursor to right-most position
CR	0D	Move cursor to left-most position
HOM	0B	Move cursor to home position
US B	1F 42	Move cursor to bottom position
US \$ x y	1F 24 x y	➤ Move cursor to specified position x = 1 ~ 14h, for columns location. ➤ y = 1 ~ 2, for lines location.
CLR	0C	Clear display screen
US E n	1F 45 n	➤ Blink display screen n = 00h ~ FFh n = 0 for no blink
ESC @	1B 40	Initialize display
US , n	1F 2C n	➤ Specify comma n = a displayable character code
US . n	1F 2E n	➤ Specify period n = a displayable character code
US ; n	1F 3B n	➤ Specify semicolon (period + comma) n = a displayable character code
US :	1F 3A	Set starting/ending position of macro definition. Ex.: 1F 3A ... (macro string) ... 1F 3A
US ^ n m	1F 5E n m	➤ Execute and quit macro. It's an interval of n between the two words. It's an interval of m between the two strings. 00 ≤ (n, m) ≤ FFh ■ n = Word time ■ m = show string time
US @	1F 40	Execute self - test
US T h m	1F 54 h m	➤ Display time 0 ≤ h ≤ 17h, for hours setting. ➤ 0 ≤ m ≤ 3Bh, for minutes setting.
US U	1F 55	Display time continuously
US X n	1F 58 n	➤ Brightness adjustment n = 1 ~ 4

Command Details

A.1. Overwrite mode

In this mode, the cursor will move towards the right and begin from the upper left position. When the cursor has reached the end of the upper line, the cursor will move down to the bottom left position to continue. When the cursor has reached the end of the bottom line, it will move to up the upper left position and overwrite the previous characters.

A.2. Vertical scroll mode

In this mode, the cursor will move towards the right. The cursor will begin from the upper left position until it has reached the end of the upper line. The cursor will then move down to the bottom left position to continue until it has reached the end of the bottom line.

A.3. Horizontal scroll mode

In this mode, the extent of the cursor activity is bound by a predefined range, limited to the upper line. (Please refer to Set or cancel window command), where the default window is the whole upper line. The cursor will begin from the left-end of the range and move rightward until it reached the end of the range, to continue, the characters that comes thereafter will start pushing the previous characters leftward from the right-end, scrolling the characters to the left.

A.4. Set the string display mode and write string to display

Set the string display mode, write to upper or lower line $d1\ d2\ d3\ \dots\ dn$ $\{1 \leq n \leq 20\}$. 'A' stands for the upper line, 'B' stands for the lower line. The string display mode will be cancelled and the display will return to the previous mode after receiving CLR or CAN.

A.5. Upper line message continuous scroll

The message (previously defined) will scroll continuously in the horizontal direction until a new command is received.

A.6. Move cursor left

When the current cursor is at the left-end position, this command operates differently depending on the display mode.

- **Overwrite mode:** When the cursor reached the left-end of the lower line, it will continue to the right-end of the upper line, overwrite previous characters. When it reached the left end of the upper line, it will continue to the right-end of the lower line.
- **Vertical scroll mode:** When the cursor reached the left-end of the lower line, the lower line will scroll up and replace the previous upper line, the lower line will be cleared and the cursor will continue to the right end of the lower line.
- **Horizontal scroll mode:** The cursor will remain stationary.

A.7. Move cursor right

Move the cursor to the right. When the cursor has reached the right-end, this command operates differently depending on the display mode.

- **Overwrite mode:** When the cursor has reached the right-end of the lower line, it will continue to the left-end of the upper line and overwrite previous characters. When it has reached the right-end of the upper line, it will continue to the right-end of the lower line.
- **Vertical scroll mode:** When the cursor has reached the right-end of the lower line, the lower line will scroll up to replace the upper line, the lower line is cleared and ready to continue characters thereafter.
- **Horizontal scroll mode:** The cursor will remain stationary.

A.8. Move cursor up

Move the cursor up one line. When the cursor is on the upper line, this command operates differently depending on the display mode.

- **Overwrite mode:** The cursor is moved to the same column the lower line.
- **Vertical scroll mode:** The characters displayed on the upper line is scrolled to the lower line, and the upper line is cleared. The cursor will remain at the same position.
- **Horizontal scroll mode:** The cursor will remain stationary.

A.9. Move cursor down

Move the cursor down one line. When the cursor is on the lower line, this command operates differently depending on the display mode.

- **Overwrite mode:** The cursor is moved to the same column on the upper line.
- **Vertical scroll mode:** The characters displayed on the lower line are scrolled to the upper line, and the lower line is cleared. The cursor will remain at the same position.
- **Horizontal scroll mode:** The cursor will remain stationary.

A.10. Move cursor to home position

The cursor will move to the left-end position of the upper line.

A.11. Move cursor to left-most position

The cursor will be moved to the left-end position of the current line.

A.12. Move cursor to right-most position

The cursor will be moved to the right-end position of the current line.

A.13. Move cursor to bottom position

The cursor will be moved to the right-end position on the lower line.

A.14. Move cursor to specified position

The cursor will be moved to column x on line y.

A.15. Initialize display

The data in the input buffer will be cleared and reset from default.

A.16. Reset the window

Reset the window on the display.

When s=0, the window is cancelled (values: x1, x2, and y are not required.)

When s=1, the window will be reset (values: x1, x2, and y are required.)

The x1 and x2 set the position of the left column and right column, respectively, of the window.

The y sets the upper line or the lower line of the window.

This function is valid within the horizontal mode.

A.17. Clear display screen and clear string mode

All the display characters will be cleared, and the string mode will be cancelled.

A.18. Clear current line and cancel string mode

The current line is cleared, and the string mode is cancelled.

A.19. Brightness adjustment

Adjust the brightness of the vacuum fluorescent display.

When n=3, brightness=70%

When n=4, brightness=100%

A.20. Set cursor ON or OFF

When n=0, cursor is OFF

When n=1, cursor is ON
